

CURB PRICES ARE HIGHER AT CLOSE

Heaviest Activity Is Confined Again to Oils—Final Tone Is Mixed.

The strong tone which prevailed in the outside market on Thursday was continued on a broader scale at yesterday's opening, and further advances were made throughout the list and heaviest activity was confined to oil. The market's later tone, however, became somewhat mixed, due to profit taking in some quarters, but offerings were well used and prices at the close were slightly more than Thursday's highs.

General Applied made further improvement in the first hour, but was under pressure and closed with a small loss. Other South American oils generally completed the day with fractional advances. A better demand was reported for Standard Oils, which moved up several points, and National Oil of New Jersey sold to its highest level in several weeks.

PARTICULAR activity was noticeable in numerous low priced mining and industrial issues, which responded with substantial gains. Little improvement was shown in the trading in higher priced miscellaneous stocks, but a steady tone was evident, particularly in foreign holdings which recovered most of the previous day's losses, moved to higher levels.

Total sales and range of prices follow:

INDUSTRIALS.

Sales. High. Low. Last. Curb.
